

PREVENTIVE CARE

- The floor should be installed last when undertaking works.
- If other works have to be done after the floor is installed, protect it with sheets of cardboard.
- Do not drag furniture across the floor.
- Use felt on the feet of chairs and furniture.
- The wheels of castor chairs must comply with the DIN 68131 (Type W1) standard.
- For added protection, use a suitable mat under castor chairs.
- Put a quality mat at all points of accesses to retain sand, moisture and dirt.
- Never use mats with a rubber or latex bottom, as they may irreversibly stain the floor.
- Never use cleaning products with abrasive agents or solvents, such as acetone.
- Never use wire brushes.
- Avoid wetting the floor.
- Place protective mats in areas around cooking equipment and dishwashers to protect the cork flooring from spills, water, food, drinks, grease and anything else that might cause damage to the floor of your kitchen.
- Ideal and healthy environmental conditions are 35-65% relative humidity at 20°C (68°F).
- When using domestic heating intensively, the humidity of the air indoors may fall to very low levels, causing the surface to dry out excessively.

As cork is a natural material, this may lead to shrinkage of the tiles, causing the appearance of small joints between them. To avoid this, use a humidifier.

- Remember that mats placed on the floor may act as heat accumulators, which will increase the temperature of the floor surface more than the recommended maximum surface temperature (which should not exceed 20-22°C).
- Being a natural material, cork tends to lose a little colour when exposed to sunlight. It is important to change the position of rugs and furniture regularly to allow the colour to change evenly.
- Use curtains, blinds or another sun protection system to minimize this effect.
